

The background features a dark blue field on the left and a grey field on the right, separated by a diagonal line. In the upper right, there are white, stylized wave-like lines. In the lower right, there is a 3D wireframe plot with a color gradient from yellow at the top to blue at the bottom. Further down and to the right, there are faint blue circuit-like diagrams with lines and nodes.

MATLAB EXPO 2017

Machine Learning Simplified

Graham Dudgeon, PhD
Principal Industry Manager

Brain-controlled Robots

Consider Machine Learning When

Solution is too complex for hand written rules or equations

Speech Recognition

Object Recognition

Engine Health Monitoring

Because algorithms can

learn complex non-linear relationships

Solution needs to adapt with changing data

Weather Forecasting

Energy Load Forecasting

Stock Market Prediction

update as more data becomes available

Solution needs to scale

IoT Analytics

Taxi Availability

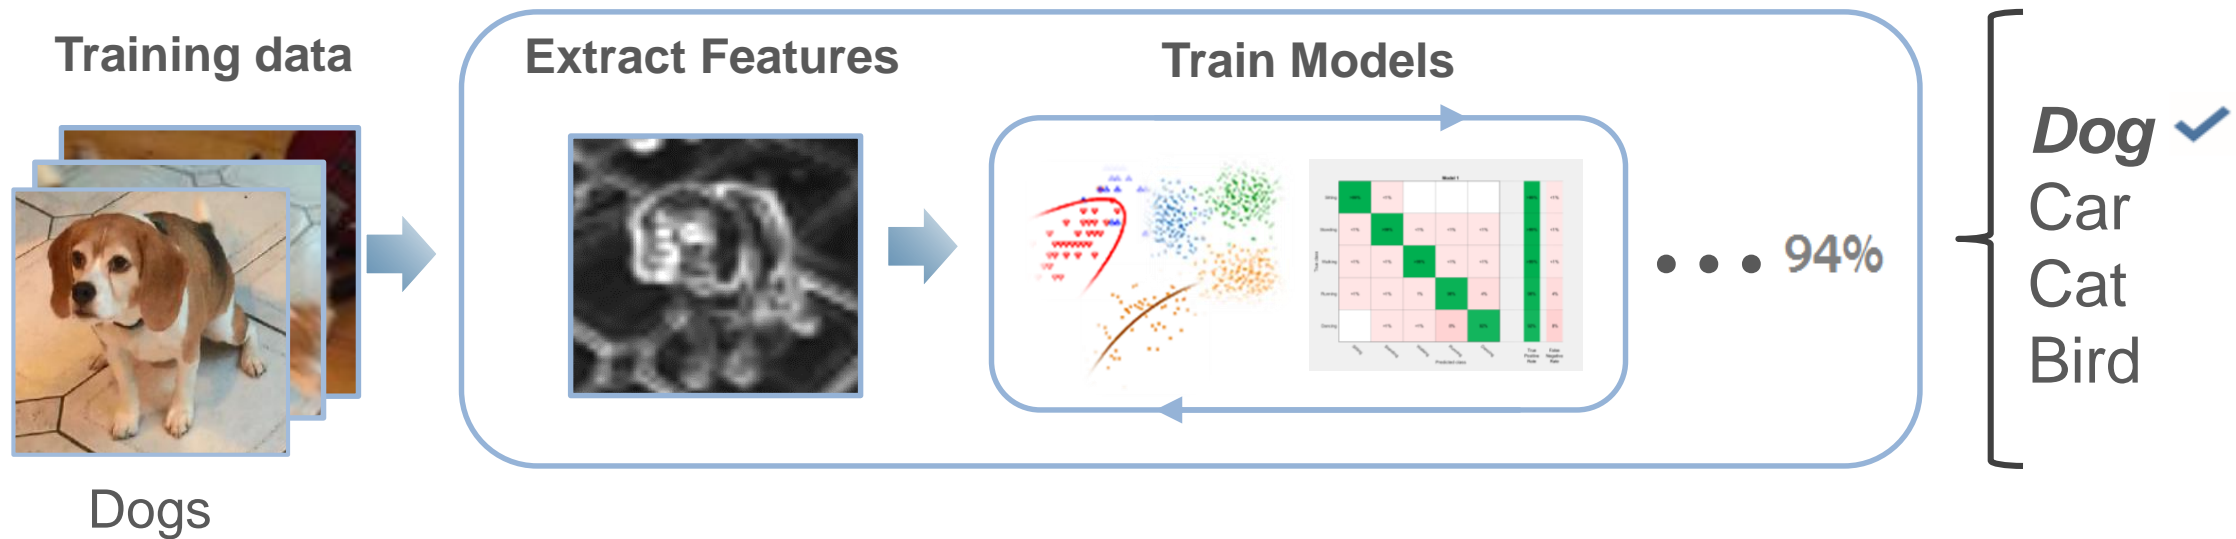

Airline Flight Delays

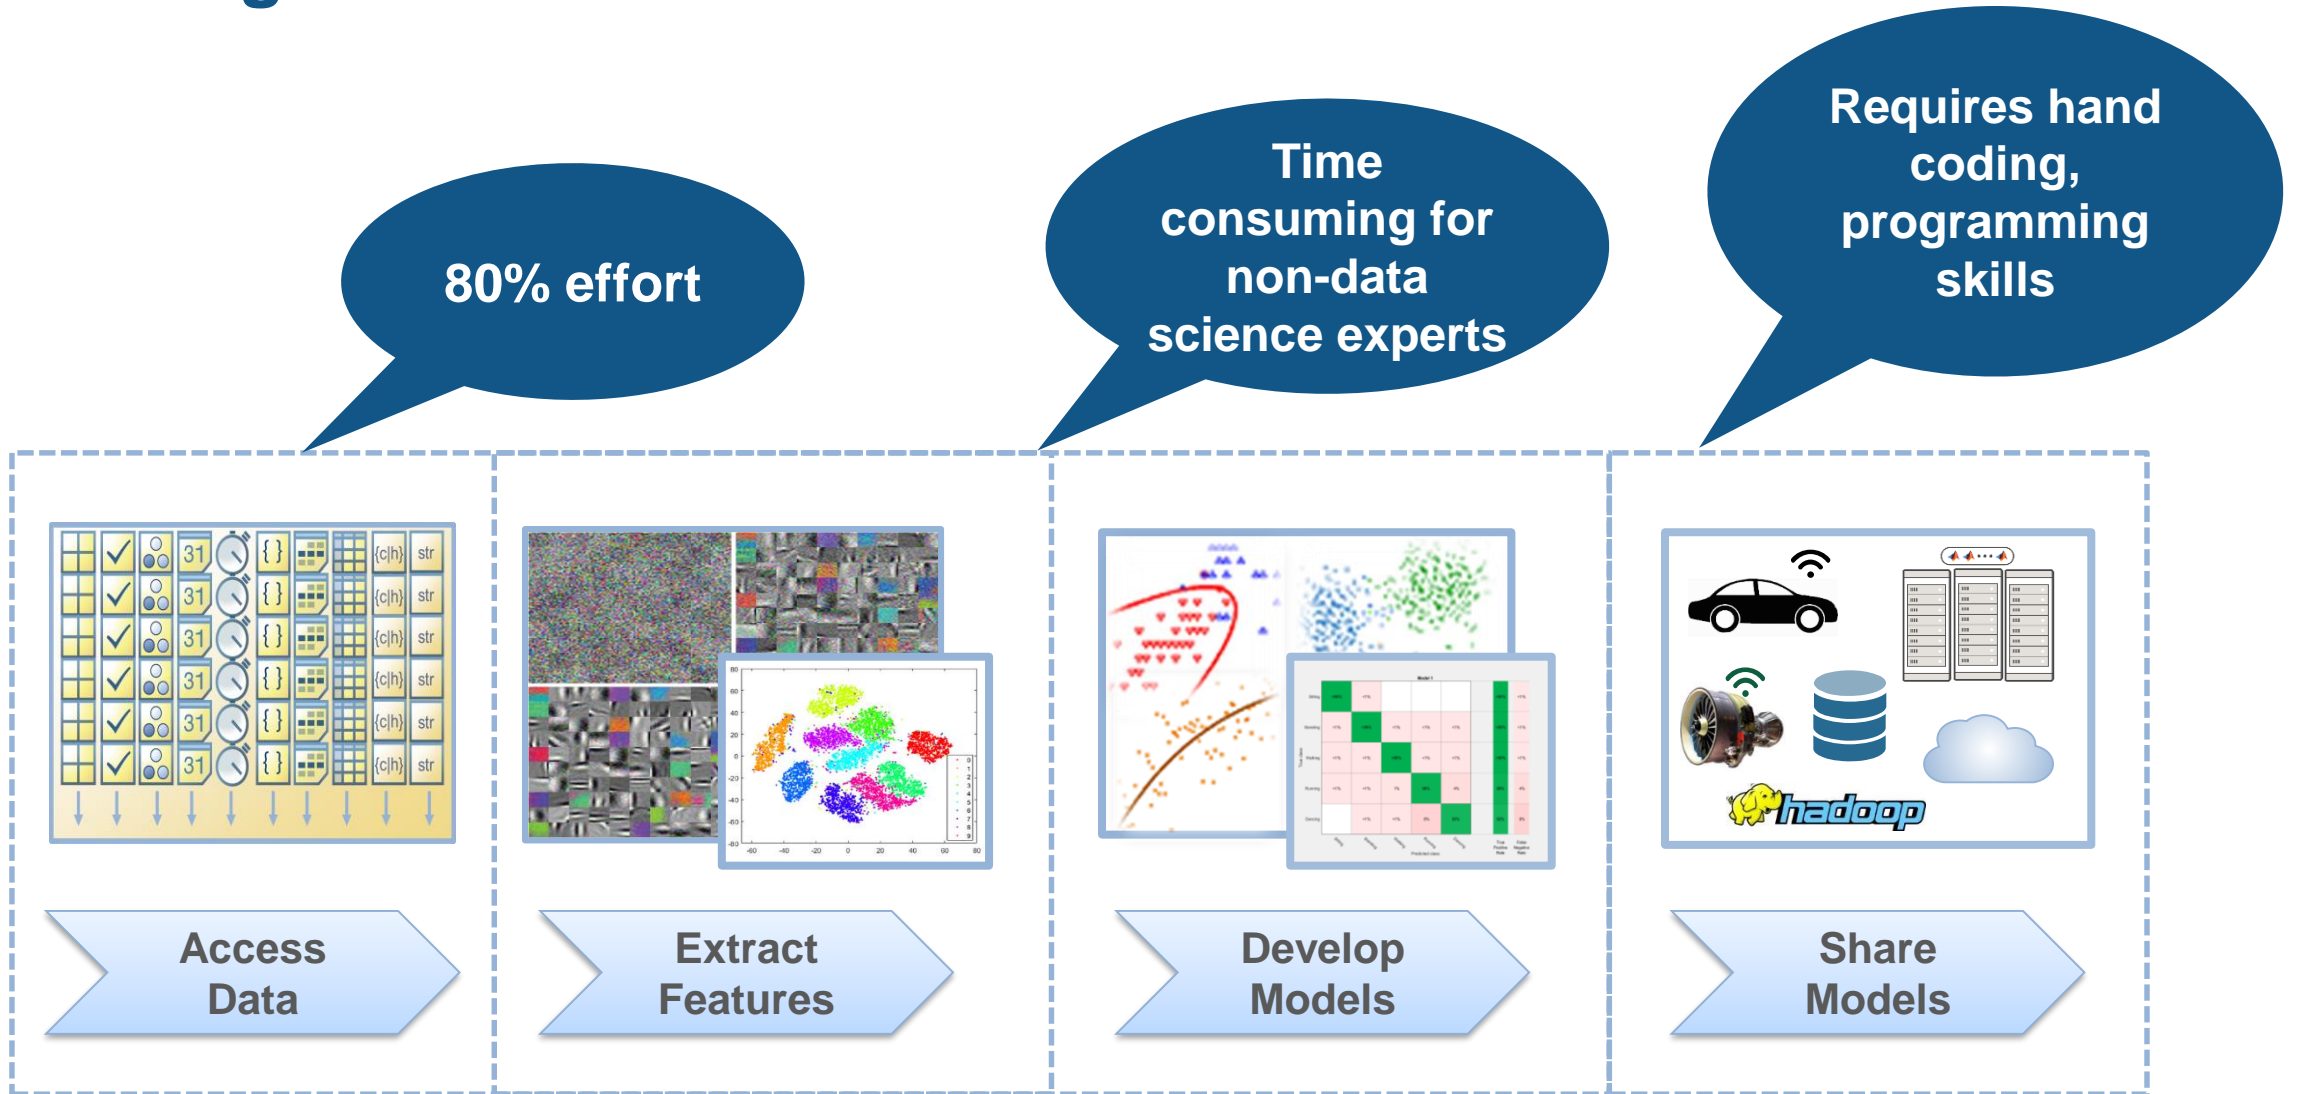

learn efficiently from very large data sets

What is Machine Learning?

Machine learning algorithms use computational methods to “**learn**” information *directly* from data without assuming a predetermined equation as a model

Challenges

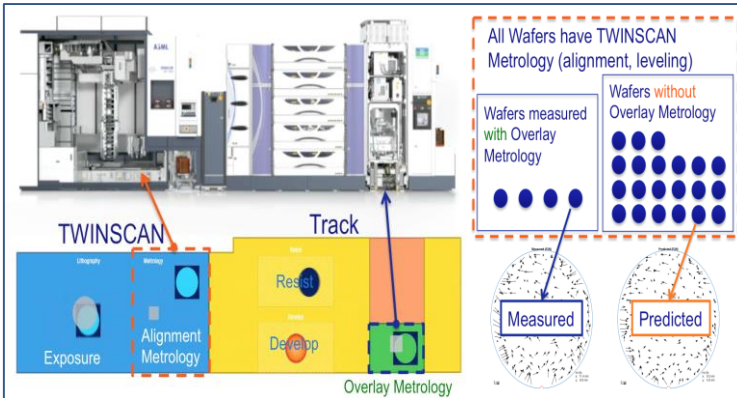

Challenges from our Customers

**BAKER
HUGHES**

- Convert **unreadable data** into a usable format.
- **Automate** filtering, spectral analysis, and transform steps for multiple trucks and regions.
- Develop a predictive maintenance system to reduce pump equipment **costs and downtime**.

ASML

- **Lack of experience** with neural networks or machine learning.
- Develop a **prototype quickly**, relying on functions that have been deployed across ASML's large, **diverse user** base and **maintained** by dedicated professionals.

**New MATLAB framework makes machine learning
easy and **accessible** for Engineers**

Why is Deep Learning So Popular Now?

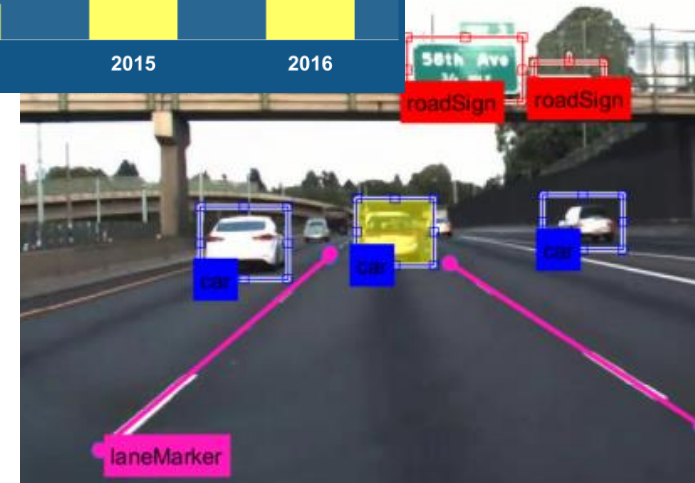

Deep Learning Enablers

Acceleration with GPUs

Massive sets of labeled data

Availability of state of the art models from experts

**New MATLAB framework makes deep learning
easy and **accessible** for Engineers**

MATLAB makes Deep Learning Easy and Accessible

- Handle large images sets
- Accelerate with GPUs
- Visualize and debug networks
- Access pre-trained models

Deep Learning is Changing the World

Example

Transfer learning in 10 lines of code!

```

1 clear
2
3 camera = webcam; % Connect to t
4 nnet = alexnet; % Load the neu
5
6 while true
7     picture = camera.snapshot; % Take a picture
8     picture = imresize(picture, [227,227]); % Resize the picture
9     label = classify(nnet, picture); % Classify the pictur
10
11     image(picture); % Show the picture
12     title(char(label)); % Show the label
13     drawnow;
14
15 end
    
```

Example

Train from scratch!

Train a Deep Learning Vehicle Detector

Train a vision-based vehicle detector using deep learning.

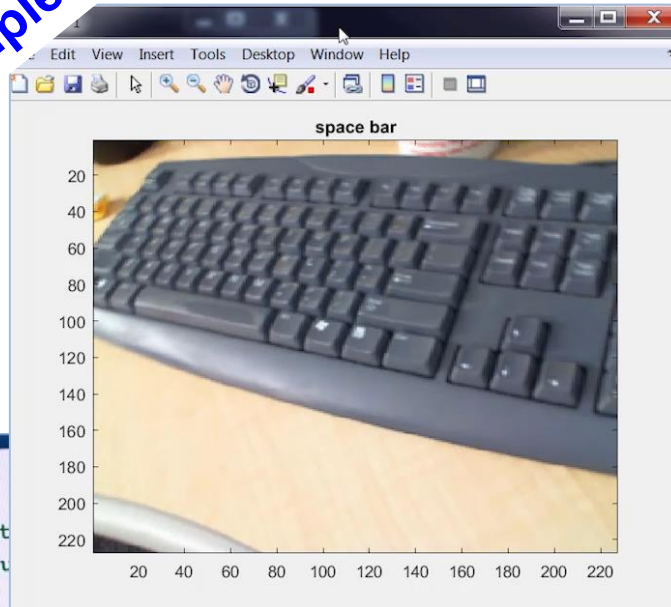

Deep Learning is changing the world

Transfer learning in 10 lines of code!

```

1 clear
2
3 camera = webcam; % Connect to the camera
4 nnet = alexnet; % Load the neural network
5
6 while true
7     picture = camera.snapshot; % Take a picture
8     picture = imresize(picture, [227,227]); % Resize the picture
9     label = classify(nnet, picture); % Classify the picture
10
11     image(picture); % Show the picture
12     title(char(label)); % Show the label
13     drawnow;
14
15 end
    
```

Train from scratch!

Train a Deep Learning Vehicle Detector

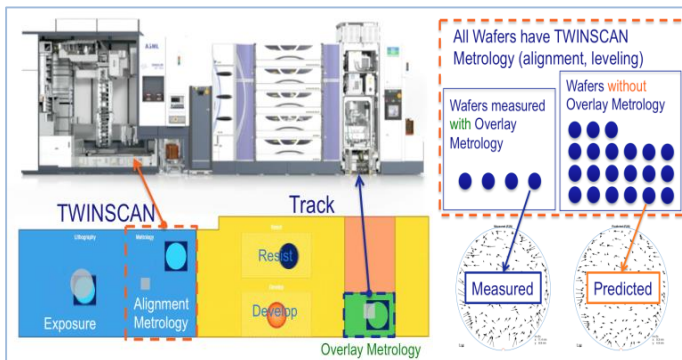

Train a vision-based vehicle detector using deep learning.

Our Customers Achievements

“**MATLAB** gave us the ability to convert previously **unreadable data into a usable format**; automate filtering, spectral analysis, and transform steps for multiple trucks and regions; and ultimately, **apply machine learning techniques in real time to predict** the ideal time to perform maintenance.”

Gulshan Singh
Baker Hughes

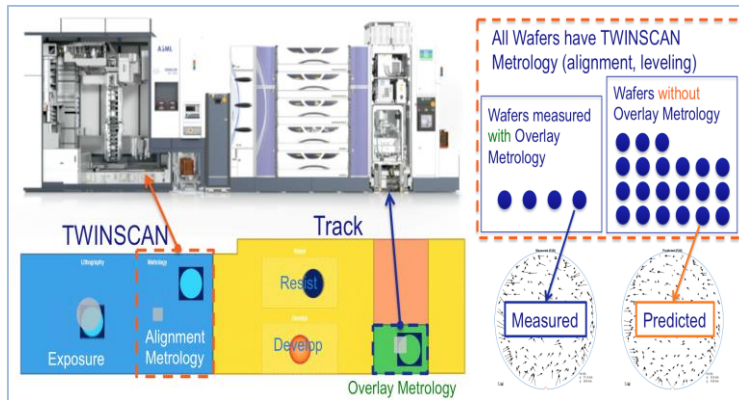

“As a process engineer I had no experience with neural networks or machine learning. I worked through the MATLAB examples to find the best machine learning functions for generating virtual metrology. **I couldn't have done this in C or Python—it would've taken too long to find, validate, and integrate** the right packages.”

Emil Schmitt-Weaver
ASML

Summary of results

- **Savings** of more than \$10 million projected
- Development **time reduced** tenfold
- Multiple types of data **easily accessed**

- Industry **leadership** established
- Potential manufacturing **improvements** identified
- Maintenance overhead **minimized**
